was "sound and healthy," because that is what her trainer told her, she said. But new veterinary bills arrived, showing that the horse had been treated regularly with

clenbuterol, a widely abused medication for breathing

problems that can build muscle by mimicking anabolic

steroids. "If a horse is sound, why does it need all these drugs?" she asked. "I never gave consent." Gene and Eileen Hartis said they, too, were shocked by their bill, from a California veterinarian, showing that in just over three months in 2010, their graded stakes winner, Princess Haya, had been given drugs for pain, soreness and swelling 34 times, as well as seven doses of clenbuterol.

trainer," Mr. Hartis said. More than anyone in the sport, racetrack veterinarians are supposed to put the horse first, having taken an oath to protect "animal health and welfare."

"It's so contrary to our philosophy that we explained in length to our vet and

Yet in the shed rows of America's racetracks and at private training centers, racehorse veterinarians often live by a different code — unique in the veterinary community — one that emphasizes drugs to keep horses racing and winning rather than treating soreness or injury through rest or other less

aggressive means, according to dozens of interviews and a review of medical and regulatory records. Only veterinarians can legally prescribe medicine, yet they often let trainers,

who are paid to win races, make medical decisions, including which drugs to

use. These veterinarians also have a powerful financial incentive to prescribe drugs: they are both doctor and drugstore, and so the more drugs they prescribe, the more money they make. Selling and administering drugs, in fact, accounts for most of their income.

In contrast, veterinarians who treat small animals or pets earn most of their

money from examinations and other professional services. "Is it any wonder that our industry is being criticized for being overmedicated?" said Stuart S. Janney III, chairman of the Thoroughbred Safety Committee of the <u>Jockey Club</u>, an influential industry group.

Still, despite the concern that a drug culture pervades America's racetracks especially with the arrival of casinos offering fattened purses — little attention has been paid to the veterinarians who prescribe these medications. The American Association of Equine Practitioners, the industry's most

influential veterinary group, acknowledges that "to a very large extent" medical treatments are geared toward when a horse is racing, rather than toward what might be in the horse's best interest. And while the group has worked hard to make racing safer, it has made scant progress in changing how racehorse veterinarians earn their money.

"That's a tough nut to crack," said Dr. Jeff Blea, the association's vice

The association of equine veterinarians says treatments "should be based upon

Dr. Rick Arthur, equine medical director for the California Horse Racing Board, said veterinarians often find themselves in an untenable position: "The vet's fiduciary responsibility is to the owners, but it's the trainers that hire and fire them. Who are you going to be beholden to?" What's more, trainers often know their horses better than veterinarians do, because they spend more time with them.

Hong Kong, widely regarded as the world's safest, most tightly regulated horse

racing venue, operates differently. Veterinarians are employed directly by the

Hong Kong Jockey Club, which oversees racing and holds disciplinary power.

endoscopically examined within two days of the prescription, according to the

club's executive director, William A. Nader. "Clinicians must report all findings

It did not take long for word to circulate that a cheap, easily obtainable drug

might make horses run faster if administered close to race time. Better yet,

So on April Fools' Day in 2011, trainers at harness tracks tried it on nine

racehorses. All finished in the money — eight in first place, one in second.

Over 12 days, with nearly \$600,000 at stake at harness tracks in New York and

so, leaving Dr. Grasso free to work at off-site training centers.

The racing board also referred his conduct to the state's veterinary board,

vehicle. He eventually pleaded guilty to resisting arrest.

Grasso lost his New York State racing license for giving drugs too close to race

license in the state, but when they tried to arrest him, Dr. Grasso led the police

Though New York's Racing and Wagering Board has stripped Dr. Grasso of his

which could bar him from practicing anywhere in the state. But it has not done

What's more, New York is not among the few states that let regulators test for

illegal drugs at private training centers. When the racing board tried to put in

place out-of-competition testing, a horsemen's group went to court in 2011 and

As a result, said Dr. George A. Maylin, who directs the state's testing program, there is no effective way to detect certain performance-enhancing drugs. Horses can be doped at the training centers, then shipped to racetracks. "The drugs are used days to weeks in advance, and positives will only be from mistakes and dummies," Dr. Maylin said. Indiana, which has one of the most comprehensive out-of-competition

programs, discovered last year that four racehorses had been illegally given

zilpaterol, a bulking supplement for cattle. Joe Gorajec, executive director of

the Indiana Horse Racing Commission, said the racing industry's failure to

Joseph S. Anderson, a trainer who had five horses test positive for

push harder for out-of-competition testing had created a major "blind spot."

oxymetazoline last year after the state began testing for it after races, kept his

horses at one of the off-site training centers where Dr. Grasso works, north of

New York City. Mr. Anderson told investigators that he bought his nebulizer

mix from his two veterinarians, one of them Dr. Grasso, records show. The

nebulizer regimen "is a fairly regular one at the barn," Mr. Anderson said.

Dr. Grasso, in an interview, accused regulators of having a vendetta against

him and his family. "Anything that goes wrong with harness racing they point

to me," he said. Afrin, he said, had long been used for therapy in harness and

While acknowledging past mistakes, Dr. Grasso said he treats horses well.

"Veterinarians out in the field are out there to help horses, not hurt them," he

said. "We are probably the only ones who have the horses' well-being in mind."

case, the state Education Department's Office of Professional Discipline, which

oversees the Veterinary Board, issued a statement that said, in part, "We have

recently taken affirmative steps to have the Racing and Wagering Board share

State veterinary boards rarely discipline veterinarians who run afoul of racing

data following their review of racetrack veterinary medicine practices."

After repeated questions from The Times about its handling of Dr. Grasso's

thoroughbred horses and had never before resulted in positive tests.

The trainer was suspended and fined. Dr. Grasso remained beyond the

rules. In New York, only 2 of the board's 125 disciplinary actions over the last 10 years involved racehorse veterinarians, a review by The Times found. "Losing a racing license is not a big enough deterrent," said Edward J. Martin, president of the Association of Racing Commissioners International, a trade group. "We believe losing a veterinarian's license is. This is a hole in the
